

Resultados do teste ($R_1=120$, $R_2=240$, $R_3=180$, $V=9$)

$$R_{x} = \frac{180 \times 240}{120} = \frac{43200}{120} = 360 \Omega$$

$$R_{\text{total}} = \frac{(120 + 360) \times (240 + 180)}{120 + 360 + 240 + 180} = \frac{480 \times 420}{900} = \frac{201600}{900} = 224 \Omega$$

$$I_{\text{total}} = \frac{9}{224} = 0,04018 \text{ A (ou } 40,18 \text{ mA)}$$

$$P_{\text{total}} = 9 \times 0,04018 = 0,3616 \text{ W}$$

$$\text{Equilíbrio: } 120 \times 360 = 43.200 \text{ / } 240 \times 180 = 43200 \text{ (Equilibrado)}$$
